

Novelty for producers of blown film!

Avoid problems with marks from the calibration cage rollers or other types of bubble guides in the film. The solution is *Falcon Pearl* low friction profiles to replace the existing rollers. The *Falcon Pearl* low friction profiles ensure that the film bubble is perfectly guided without leaving marks on the hot film.

The profiles are made from extruded aluminium profiles and treated with SM-24 coating. This coating is four times harder than tool steel and has a lower COF than Teflon®.

The low friction profiles can be manufactured for:

- Calibration cages
- Bubble guides
- Collapsing frames
- Film folding equipment
- Turning bars for oscillating nips
- Spreader bars to prevent wrinkles and creases

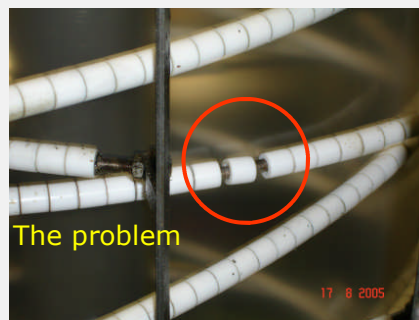

Obvious advantages:

- Long service life, no rollers to replace
- Easy to clean, no maintenance
- Minimum friction, will not pull on the film
- Exact retrofit to the calibration cage
- Will not pinch the film, no marks
- Optimum positioning of the cage to the frost line
- Lower investment costs than cages with felt rollers or air cushion cages
- Easy to install on all types of cages

Our service concept:

- We will send budget offer within 24 hours!
- Shipment ca. 25 working days from receipt of accepted drawings!
- Guaranteed function, sale-or-return!
